

THE HULL SAVER

A closed cell fender

- Lightweight
- 98% closed cell
- Not an inflatable
- No more blow-outs
- Extremely durable

Tough, heavy vinyl cover minimizes abrasion and its elasticity and tensile strength are excellent for those constant blows. Shredded, closed-cell foam makes up the resilient interior of this extremely durable fender.

Mount vertically or horizontally. A one-inch thru-hole provides easy access for the fender tether.

No anxiety or concern about a possible puncture. Bullet hole will not materially affect its function.

Extensively tested in the most abusive conditions in ports from Newport Beach, California, to Seattle, Washington, to Alaska.

These resilient fenders keep their shape, blow after blow.

3 Great Sizes

Model #214	14" Diameter x 44" Long	25 lbs.
