

Essential equipment for effective rescue

SPEEDLINE 250 LINETHROWING APPARATUS

(Worldwide SOLAS 74/83 approval)
For ship-to-ship and ship-to-shore rescue operations this is the definitive linethrower: handheld, self-contained and rocket-powered, it propels a 4mm diameter line up to 275m. It is designed for easy stowage onboard.

- Speedline 250 complete
- Spares kit of 4 rockets and strikers
- Buoyant head for rocket

MANOVBORBOARD AND BUOYSMOKE LIFEBUOY MARKERS

(Worldwide SOLAS 74/83 approval)
Manoverboard is a combined day and night 2-hour light and 15-minute smoke lifebuoy marker. It's safe to use on petrol or oil-covered water and the Lithium powered light batteries are sealed for life - therefore annual replacement is not required. For ship's bridge wing mounting a 4.3kg lifebuoy should be fitted.

Buoysmoke is a daylight, 15-minute, smoke only marker, similar to Manoverboard, mainly for use on US and Japanese flag vessels (use 4.3kg approved lifebuoys). A lifebuoy light must also be attached to the lifebuoy in addition to the Buoysmoke.

- Manoverboard Kit, including mounting bracket
- Buoysmoke Kit, including mounting bracket
- Bracket only
- Stainless steel bracket only

INFLATABLE RADAR REFLECTORS

IR-1
(SOLAS 74/83 approval)
A high specification, inflatable radar reflector approved by the D.O.T. which is designed specifically for use in liferafts. The IR-1 can be supplied with a telescopic mounting pole which is attachable to a liferaft's viewing port.

IR-2
(SOLAS 74/83 Standard)
A cost-effective inflatable radar reflector for use in liferafts and lifeboats. It may also be used as a yacht's emergency radar reflector when hoisted up the mast.

POLYBOTTLE
A heavy-duty, waterproof and buoyant polythene container, with a robust screwtop lid and carry handle, the Polybottle is ideal for dry storage on ships, boats or rescue craft.

SHIP'S BRIDGE DISTRESS KIT
12 Para Red Rockets contained in a Polybottle.

SHIP'S LIFEBOAT DISTRESS KIT
4 Para Red Rockets, 6 Pinpoint Handflares, 2 Lifesmokes, in a Polybottle.

PARA RED ROCKET
(Worldwide SOLAS 74/83 approval)
The Para Red distress rocket is designed specifically for long-range distress signalling, it is handheld and easy to operate from the ship's bridge, lifeboat or liferaft. The flare is ejected at a height of 300 metres on a parachute and burns for 40 seconds at 30,000 candela.

RED HANDFLARE
(Worldwide SOLAS 74/83 approval)
Ideal for pinpointing the rescue location, the red handflare incorporates a unique, International Design Award-winning firing mechanism. This means it can be easily activated using only one hand or cold, wet hands. When fired, the flare will burn for 60 seconds at a minimum of 15,000 candela.

LIFESMOKE
(Worldwide SOLAS 74/83 approval)
The Lifesmoke is a buoyant orange distress smoke signal which can indicate position, wind-speed and wind direction to rescue aircraft and ships. For daylight use and safe to operate on petrol or oil-covered water, the Lifesmoke's simple, pull-cord ignition system releases dense orange smoke for over 3 minutes.
